

# SOUTH WEST LHIN WAIT TIMES FOR HIP AND KNEE REPLACEMENT - Q4 FY 2017-2018

## Why is this information useful?

Providing regional wait times data will help physicians and patients select a surgeon referral that incorporates the patient's preferences including length of wait, surgeon and location.

The data is organized in a table containing the 90th percentile total wait time by surgeon for HIPS and KNEES. Provincial Wait time targets are 364 days. The green bars represent waits that are within target ranges, the red bars represent wait times that are outside of target ranges.

**Total Wait Times (Days) – 90th Percentile for Q4 FY 2017-18 (January - March)**

- 90 P refers to the 90th percentile. This measurement shows the amount of days that have passed before 90 percent of patients have their consult or surgery

\*Indicates that there were less than 6 patients in the data

\*\* Indicates that the LHIN 90P was used due to some incomplete wait times data

Note: This data is based on patients who were referred for consult over a year ago, current wait times may differ from what is displayed.
